Customer Information on the Disposal of Packaging Waste and Waste Electrical Equipment

Protect the Environment

Let's protect the environment together. Please use the designated disposal and recycling channels for packaging and used products to contribute to recycling efforts and environmental protection.

Packaging Waste

Recycling plays a vital role in preserving our environment by conserving limited resources and reducing negative environmental impacts. Only packaging that is properly disposed of can be recycled effectively. In Germany, packaging waste is primarily disposed of through the dual system. For this purpose, the "yellow bag" or "yellow bin," glass containers, and collection bins for waste paper are available. You can find more information at <https://www.muelltrennung-wirkt.de/en/>, an initiative of the dual systems. For packaging that does not fall under the responsibility of the dual systems, we are happy to take responsibility. Please contact us about this.

We are properly registered in the public producer register LUCID under DE5077943314852.

Waste Electrical Equipment

Waste electrical equipment must be collected separately and recycled appropriately. More information is available at <https://e-schrott-entsorgen.org/index.html>.

Waste electrical equipment must not be disposed of in residual or household waste but must be collected separately. This ensures the recycling of such devices. That's why electrical and electronic devices are marked with the crossed-out wheeled bin symbol:

We are happy to assist you with organizing the return of your old devices. We work with a service provider who, if needed, can handle the proper disposal of your waste electrical equipment.

Please also make sure to delete any personal data from your old devices before disposal.

We are properly registered in the public manufacturer register of EAR under **WEEE Reg. No. DE 47105637**.
